**VWVortex.com - What is a normal coolant temperature?**  
Needless to say that it happened also after an Audi recall remapping. At first thought that it's thermostat,obviously,changed it - didn't solve the problem. After that I changed the temperature sensor (Coolant temperature sender), also no change. The temperature doesn't go above 65°C and on a constant speed of 110 km/h drops to around 50.

**Coolant temperature - thermostat or sensor? - TDIclub Forums**  
This particular coolant temp sensor fits most current model VW and Audi models (listed below). It has multiple jobs and can cause a variety of issues when it fails. The first fault code listed below \*P1281 - Performance Malfunction in Cooling System\* more commonly is related to a bad thermostat.
