rotor teeth stepper motor is expressed as,  $360 / (4 \times 3) = 30$  degrees (as step angle =  $360 / N_r \times q$ ). The step angle can be further reduced by increasing the number of poles on the stator and rotor, in such case motors are often wound with additional phase windings.

A stepper motor rotates with a fixed step angle, just like the second hand of a clock. This angle is called "basic step angle." MOONS' offers several types of "basic step angle" as standard motors: 2-phase stepping motors with a basic step angle of  $0.9^\circ$  and  $1.8^\circ$  and 3-phase stepping motors with a basic step angle
