Rule based systems begin with humans programming a set of instructions into a computer. Rule based systems are often different from each other in practice, while remaining similar in principle. For example, a doctor may incorporate the assistance of a computer with a rule based system for aiding the diagnosis process.

Rule Based Machine Translation - Natural Language Processing

However logic-based approaches are not optimized for run-time event recognition (as they are mainly query-driven systems). In this paper, we present an expressive logic-based language for specifying and combining complex events. For this language we provide both a syntax as well as a formal declarative semantics.
