Though less often cited than high-reliability theory in the health care literature, normal accidents theory is equally prominent in the study of complex organizations. A more pessimistic view, normal accidents theory suggests that, in some settings, a major accident becomes almost inevitable. Perrow identifies "complexity" and "tight coupling" as the two factors that create an environment in ...

### Normal Accidents: Living with High Risk Technologies ...

Normal Accidents: Living with High-Risk Technologies is a 1984 book by Yale sociologist Charles Perrow, which provides a detailed analysis of complex systems from a sociological perspective. It was the first to "propose a framework for characterizing complex technological systems such as air traffic, marine traffic, chemical plants, dams, and especially nuclear power plants according to their riskiness".

### The Cold War and American Science:

"Normal" accidents, or system accidents, are so-called by Perrow because such accidents are inevitable in extremely complex systems. Given the characteristic of the system involved, multiple failures which interact with each other will occur, despite efforts to avoid them.

Perrow is also the author of the book Normal Accidents: Living With High Risk Technologies (ISBN 0-691-00412-9) which explains his theory of normal accidents; catastrophic accidents that are inevitable in tightly coupled and complex systems.

In 1984, I published Normal Accidents, concerned with accidents in a variety of risky systems. Normal Accident drew attention to two different forms of organizational structure that Herbert Simon had pointed to years before, vertical integration, and what we now call modularity.

### Normal accidents (1999 edition) | Open Library

The difficulty of using Normal Accident Theory as a guide to risk is that it increases the importance of possibility or the ease an event will happen vs. probability or the likelihood an event will happen. Perrow C. 1999. Normal Accidents: Living with high-risk technologies. Princeton, NJ: Princeton University Press. Perrow C. 1981.

### HRO Model Overview | Perrow/Complex Organizations

The concept of normal accidents was formulated by sociologist Charles Perrow in Normal Accidents: Living with High Risk Technologies (1984), but is related to a number of other analyses of accidents in complex, technological societies. Perrow used the concept to describe a type of accident that inevitably results from the design of complex mechanical, electronic, or social systems.
